How to transfer files from old phone to new iphone. How to transfer files from old phone to new phone. How to transfer files from old phone to new phone samsung. How to transfer all files from old iphone to new phone. How to transfer files from old iphone to new phone samsung.

Transferring data from one device to another can be done wirelessly. One method that is fast and ensures transfer of large files of data from one android to another easily is the Near Field Communication (NFC). Near Field Communication which supports android beam, helps to transfer data between two devices by pressing their backs together.Other devices might require you to select “More” in order to access the NFC option. If you still don’t see the NFC option then your device is not equipped with the NFC functionality.Once beaming is complete, an audio notification will signaling the end of the transfer. Another way you would know when the process is complete is automatic launch of the folders where the beamed data has been stored on your new device. The use of Gmail on android devices to move data from one android phone to another is quite simple and very suitable for small sized data. This method requires you to have a Gmail account where you would back up the information. The procedures to follow have been carefully laid out below: Move to your phone setting app and click on “Backup settings” option. Under the personal tab, click on Backup and reset. A new page will open up showing a “Backup to Google drive”. Choose the contents you want to back up. After selecting, click on “Backup” and the contents will be backed up to Google drive. Now switch on you’re the new android device and login into your Google account. Navigate to the restore backup option. Choose the file you want to restore from the drive. Click on it and tap restore. This will transfer the data to the receiving android device. Transferring data using Google account is yet another alternative to the other ones previously discussed. To begin the process of transferring your data from one android device to another, follow the steps below. Go to settings on the sending android phone and navigate to Backup and reset page. Select “Backup my data” and toggle it on. Your data will be backed up by Google. Select the backup option. This will take you to the Backups page. Here you can see a folder saved with the name of your device. This folder contains all the data you saved from your phone to Google drive. Verify that the folder contains the most recent backup files to ensure you don’t lose your data when you restore to another android device. Now, go to the receiving android device and sign in using the same Google account used in the back up in the other android device. Select the ‘Restore from backup’ option. This would restore all your data. Most devices come with their own in-built data transfer apps. Some of these devices include Samsung with its “Samsung smart switch”, Motorola with “Motorola Migrate”, LG with “LG mobile Switch” and Huawei with “Huawei Backup” Below is a step by step process on how to successfully use this inbuilt software. Samsung Smart Switch The Samsung smart switch aids your upgrade from an old Samsung phone to a new one. You can use a cable or wireless transfer. If your Samsung device does not come with the software for unknown reason, you can download it here . On both Samsung devices, open the switch app. On the sending device, tap “Send data” and on the receiving device, tap “Receive data”. Next, select either the Cable or wireless transfer option. Wireless will allow both devices to connect automatically and transfer wirelessly. Choosing the cable option will require you to plug both devices directly to one another with a USB cable using an OTG adapter. Open your old Samsung device and select the data you want to transfer to the new Samsung device. When you are done with this, your phone will notify the size and time length of the transfer. Then tap “Send” to initiate the transfer of data from on device to the other.. Motorola Migrate The Motorola migrate supports data transfer from one Motorola device to another. Motorola will be retiring the Migrate application as of Android 6.0 Marshmallow. However, you can still use the Migrate Android and non-smartphone transfer services if you are on Android 2.2 Froyo to Android 5.1 Lollipop. Here we are going to introduce how to successfully use the Motorola Migrate app to transfer data from you old Motorola device to another one. Launch the migrate app on both your old and new device. On the receiving Motorola device, select android to open a new interface. Select data you want transfer from android. Now tap “Next” to proceed. A QR scanner will appear. Scan this code on the new device to establish connection between both devices. When both devices have been connected, the Motorola migrate app will automatically begin the process the process of sending the data you have chosen from your old Motorola device to your new Motorola device. Ensure to keep both phones connected LG Mobile Switch LG’s mobile switch software provides yet another alternative in data transfer. Below, we have carefully explained how to use the LG mobile switch for data transfer. Switch on your LG device. On the home screen, swipe left. Click on Management and tap “LG Mobile Switch”. Select the data to be transferred and tap on “agree”. A list of options will appear on how to transfer the data; select “Wireless” and tap receive. On the screen that comes up next, tap on “Start”. Now go to your old LG device and open the software. Click on “Send Data” and choose “send data wirelessly”. Next, tap “tap start” and choose the name of your new phone. Then click on “accept” and on the new device, tap on “receive”. Select the data to be sent and tap “Next”. This will start the transfer. When it is completed, the data would have been transferred from your old android to the new android. Huawei Backup Huawei devices have an inbuilt manager tool known as HiSuite. This app helps users to manage the data on their Huawei devices like contacts, photos, videos and apps. The Huawei Hisuite tool also helps to back up and restore data. To initiate backup and restore on Huawei devices using Hisuite, follow the steps below Download and install the Hisuite tool on your Personal Computer Here. This tool is supported by windows only. Thereafter, open the tool and connect your Huawei device to you PC using a USB cable. Enable USB debugging on your Huawei device. Next, go to settings app on your android device and click on advanced settings. Then click on security and tap on “Allow Hisuite to use HDB”. On the device home interface you will see the “Back Up” and “Restore” options. Click on “Back Up” and choose the data you want to back up. You can encrypt your backup with a password. Next click on “Back Up” To restore the data from previous backups to Huawei, click on “Restore” and select the backup file you want. Click on “Restore” and all the selected data will be restored to you Huawei device. Android users may feel the need to switch between devices this can be for any reason from camera

quality to RAM size, Android OS, Rom Size, screen size etc. With this will come the need to transfer data from the previously used device to the new one. Making use of the above listed ways will help ensure the success of the transfer process ensuring that the data sent is protected and intact. User must note the differences between each method outlined here and follow strictly to ensure the success of the process. You can move your data to a new Android device from another kind of device, or start fresh with your new Android device. Switch from an Android device Turn on your new device. Tap Start. If “Start” doesn’t display, you can copy your data manually. When asked, make sure you connect to a Wi-Fi network. Choose to copy apps and data from your old device. If you have a cable to connect your devices, follow the on-screen instructions to copy your data. If you don’t have a cable: Tap No cable? Ok. Tap A backup from an Android phone. To copy your data, follow the on-screen instructions. Switch from an iPhone Turn on your new device. Tap Start. When asked, make sure you connect to a Wi-Fi network. Choose to copy apps and data from your old device. Recommended: If you have a cable to connect your devices, follow the on-screen instructions to copy your data. If you don’t have a cable: Tap No cable? Ok. Tap Using an iPhone device? To copy your data, follow the on-screen instructions. Check your texts, photos, and videos. Restore data from the cloud Important: If you don’t have your old device, you need to know your Google Account and password to restore data. Turn on your new device. Tap Start. To set up your device without an old device, follow the prompts. When prompted, sign in with your Google Account. If you can’t sign in, learn how to recover your account. Copy data manually Important: The options above can help you restore the most data. If none of the other steps work for you, try copying your data yourself. Sync your contacts Copy your music For music services like YouTube Music, Apple Music, and Spotify, download the app to your new device and your music syncs automatically. Copy photos, videos, files & folders Copy calendar events Tip: If your new device is a Pixel, go to our Pixel setup guide. When you transfer your account to a new device, certain information is collected to perform services on your device. Some of this functionality uses Google Play services. For example, the following information is collected: Email addresses for app functionality purposes. For example, we show account names during phone setup to allow you to select which accounts you need to transfer. Usage information, and device or other identifiers for analytics purposes. The data collected is encrypted in transit. Set up email Set up messaging Download & use apps Get answers from community experts Getting a new Android phone is all fun and exciting. But it also means users have to transfer all the data from the old device to the new one. Luckily, the process is easier than you think it is – especially if you're using the right methods to get the job done. To make it easier for beginners, we have handpicked several top-ranked apps that anyone can use to transfer files between Android phones. Let's find out!If you're looking for the best and most efficient way how to transfer files between Android phones, then AirDroid Personal is your ideal companion. Having millions of satisfied users, AirDroid offers a 3-step procedure to transfer as much data between two Android phones as you want. AirDroid also allows users to transfer files across multiple platforms which bodes well with its popularity as a #1 tool to transfer files from old phone to new phone Android. What's best is its ability to share data with friends via the remote transfer feature without limitations of a format. Not to mention, it comes at a user-friendly price compared to its competitors.Transfer unlimited files between two Android devices as well as across different platformsShare files at a blazing-fast speed without compromising the qualityAllows you to transfer files wirelesslyYou can share files to a specific device nearby and to a friend remotely effortlesslyNo upper file size limit when both devices are connected to the same Wi-Fi network1. Nearby FeatureThis feature is useful if both devices are placed close to each other. Here's how to implement it:Step 1Install AirDroid Personal on both your Android device and login with the same AirDroid account.Step 2From your old Android device, tap the Transfer icon in the left tab and select your new Android device from the available devices.Step 3Once the phones are wirelessly connected, you can easily transfer any files you want.2. Share with Friends (remote transfer)Follow the below steps to transfer files to your friends remotely:Step 1After installing AirDroid Personal on your Android device, launch it.Step 2: Add FriendNow, tap "Friends" > "Add Friend" and enter the email ID of your friend who you want to add. Ask the friend to install the AirDroid Personal app and accept the invitation link.Step 3Once your friend has accepted the request, go to Friends on your AirDroid Personal and tap the friend's name.Step 4In the chat box, tap the paperclip icon on the bottom-right to share any file you wantHaving over 100 million installs on the Google Play Store, Xender is a top-ranked app to fulfill all your data transferring needs. All you need to do is connect your Android devices via Hotspot and then, share any type of files rather quickly. What's best about this program is its ability to connect four devices simultaneously as well as transfer data across different platforms.Key FeaturesTransfer file between devices without losing the qualityConvert video to audioBuilt-in social media downloaderCross-platform supportQuick transferTransfer all file types including musicThe scanning process takes too longMany users complain of Android file transfer doesn't detect phones.Install the app on both your devices. Make sure 'Personal Hotspot" is enabled on them.Launch it on the old device, tap "+" and choose, Create Group.Then, launch it on the new device, and tap "Join Group."Find the Group and tap it.Once the devices are connected, you can start transferring files rather quickly.If you want how to transfer files from android phone to android tablet without using any third-party app, then go for this method. For this method, get a USB cable to connect your Android devices to a PC. However, you cannot move all the data using this method but for sharing music, photos, and videos, it is a handy choice.Quick, simple, and freeNo need to install any apps or softwareIt is a quite-time taking procedureYou need a PC to share filesCheck out how to implement this method: Step 1: Connect your old device to a PC using a USB cable. Step 2: On your Android phone, tap the "Charging this device via USB" notification and select "Use USB for" under File Transfer.Step 3: Then, open the File Explorer on your computer, click your phone on the left tab, and copy-paste the files to any folder on your PC. Step 4: When the files are transferred, remove this device and connect the new phone.Step 5: Repeat the step 2 to access your phone's internal storage and then, copy the files from your PC to your new phone. Just as the name indicates, Send Anywhere is a powerful application to share files between any two Android devices. Its highlighted feature is the ability to send files to multiple people at once with maximum protection. The company claims to use 256-bit encryption to ensure user privacy and data security. Key FeaturesSend data without using Wi-Fi or mobile data, using Wi-Fi direct.Transfer files to any specific deviceSend data to multiple people simultaneouslyOffers cloud storage to store your dataNo upper data sending limitPowerful 256-bit encryptionDoesn't compromise the data qualityToo slow while sharing large filesOften crashes during the processHere's how to use this program: Step 1: After installation, launch Send Anywhere. Step 2: On its main interface, tap Send and locate the files to be sent and tap Send again. Step 3: You'll see a six-digit code. Share this code with the recipient who will go to the "Receive" option on the app. Just enter the code to receive the files. Check out two more simple solutions for transferring data between Android phones.1. via BluetoothOne of the easiest methods to share files between any two Android devices is via Bluetooth. This feature is built-in on every Android phone and anyone can use it for free. However, transfer files between android phones Bluetooth is very slow, so it's a preferable option for sharing smaller files. For instance, transferring a few photos or videos from gallery should be fine. 2. via NFCUsing NFC or Near Filed Communication is another simple way to transfer data from an old Android phone to a new one. This method is particularly useful for sending larger files rather quickly. Note that the process is quite complicated and lengthy, especially for beginners. Also, not many Android phone support the NFC feature. But in any case, it is a handy way to share Android data.Below are some common questions of users pertaining to how to transfer files from Android to Android wirelessly.Can I copy large files to my phone wirelessly?The answer is a big Yes. Using Android Personal, you can easily copy and transfer all files, irrespective of their size, to another Android phone. However, you might have to wait for a few minutes to complete the process.How do I transfer files from PC to Android phones?Sending files from a computer to Android via AirDroid Personal is the quickest and most efficient method. Just Install AirDroid Desktop client on your PC and then, install AirDroid Mobile Client on your Android device. Login with the same AirDroid account on both devices and start transferring files right away.How do I transfer a file between iOS and Android?Simply install AirDroid Mobile Client on both your iOS and Android devices. Then, login with the same AirDroid account. Then, launch Android mobile client, go to Transfer feature, select your iOS device, and start sending as many files as you want.How to transfer all my stuff off my phone and put it on my tablet?Install AirDroid mobile client on your phone and tablet. Launch it on your phone and tap the Transfer icon. Select your tablet from the list and start sending files right away.Sending files from an old Android phone to a new one has never been easier in 2022. The aforementioned apps can help you transfer data between two Android phones effortlessly. But if you're looking for the fastest way to transfer files between Android phones, then AirDroid Personal is your best choice. It is recommended by all popular tech websites to transfer data between any two devices without needing a USB cable. Feel free to ask any questions.
